

AGRIPARTNERS

AgriPartners Platform Explained

Alpha v1.2 · transparent agricultural investment workflows · NEAR Testnet

AgriPartners is an Alpha workflow platform for structuring agricultural projects, evidence, reporting and investor visibility. It is a presentation and Testnet demonstration—not a production investment platform, custody provider or live settlement system.

The problem and the product

- Agricultural projects are hard to evaluate when budgets, milestones, reports and evidence are fragmented.
- Investors need timely visibility without becoming direct operators or sending funds to local participants.
- Operators need a clear, fiat-only process for receiving funds, documenting work and returning proceeds.

Capability	Value
Project workspace	Budget, milestones, evidence, reports, risks and status in one workflow.
Investor view	Readable project progress and audit trail without direct operational control.
Operator workflow	Fiat receipts, operational confirmations and supporting documents.
Presentation Mode	Guided Alpha v1.2 demonstration for investors, partners and grant reviewers.

What Alpha v1.2 proves

- Role-based workflow and public presentation experience.
- Project, expense, evidence and reporting concepts.
- NEAR Testnet events for demo audit and automation on the Estonia/investor side.
- A foundation for partner validation and a future formally approved pilot.

AGRIPARTNERS

Mandatory financial and legal boundary

Alpha v1.2 · transparent agricultural investment workflows · NEAR Testnet

External Investor → AgriPartners OÜ (Estonia) → approved conversion and cleared fiat → Uzbekistan Feedlot Operator under a separate written agreement. Cryptocurrency stops in Estonia. The Operator, Farmer product role, suppliers and employees in Uzbekistan receive and return fiat only.

Stage	What happens	Authoritative evidence
1. Investor funding	Investor contracts with AgriPartners OÜ; approved funding is received in Estonia.	Investor agreement, provider and accounting records
2. Conversion	Approved crypto, if used, is converted through approved infrastructure and fiat must clear.	Provider, bank and reconciliation records
3. Operator funding	AgriPartners OÜ sends fiat to the Uzbekistan Feedlot Operator under a separate agreement.	Operator agreement and bank/payment records
4. Operations	Operator performs agricultural work and submits reports, invoices and evidence.	Operational, veterinary, supplier and accounting evidence
5. Proceeds	Uzbekistan returns approved proceeds only through fiat banking/payment channels.	Bank, accounting and reconciliation records
6. Settlement	AgriPartners OÜ determines investor settlement under governing agreements.	Agreements, accounting and settlement records

NEAR records never replace contracts, bank statements, accounting, reconciliation, invoices or proof that fiat cleared. No direct crypto transfer to any Uzbekistan participant is permitted.

AGRIPARTNERS

Roles and value

Alpha v1.2 · transparent agricultural investment workflows · NEAR Testnet

Role	Value and responsibility
External Investor	Contracts only with AgriPartners OÜ; receives structured visibility and reporting.
AgriPartners OÜ	Central legal counterparty; governance, conversion, banking, accounting and reconciliation.
Uzbekistan Feedlot Operator	Separate agreement; fiat-only operational entity responsible for delivery and evidence.
Farmer product role	Operational work, reporting and confirmations; no wallet or crypto transaction requirements.
Partners	Legal, banking, payment, accounting, veterinary and operational services after approval.
NEAR	Testnet audit and automation infrastructure on the Estonia/investor side.

Why NEAR—and its limit

- Demonstrable workflow states and timestamped events.
- Automation experiments and verifiable hashes for approved evidence.
- Ecosystem feedback and technical validation during Alpha.
- No custody, no legal title, no replacement for official evidence, and no Uzbekistan-facing wallet requirement.

NEAR records never replace contracts, bank statements, accounting, reconciliation, invoices or proof that fiat cleared. No direct crypto transfer to any Uzbekistan participant is permitted.

AGRIPARTNERS

Status, risks and next decision

Alpha v1.2 · transparent agricultural investment workflows · NEAR Testnet

Area	Position
Current	Alpha v1.2 presentation release on NEAR Testnet.
Not current	Mainnet, live funds, custody, licensed investment activity or commercial operation.
Primary risks	Legal/regulatory, counterparty, livestock, market price, FX, evidence quality, execution and liquidity.
Gate to pilot	Funding, named partners, approved agreements, providers, controls and qualified legal review.

Recommended next steps

- Validate the workflow with investors, operators and professional advisers.
- Confirm a named pilot operator, suppliers, veterinary controls and evidence standards.
- Approve Estonia-side banking/payment, accounting, compliance and crypto-to-fiat infrastructure.
- Execute separate Investor and Operator agreements before any real-money movement.
- Keep Alpha v1.2 in Testnet presentation mode until formal pilot approval.

AgriPartners should be evaluated today as a transparent agricultural workflow and evidence platform in Alpha—not as a live investment product.
