5. Key terms

- The 60/40 split applies to net profit after pre-split costs.
- The 20% performance fee applies only to the investor's 40% share.
- \$2,500 in cycles 3–6 is returned to the investor before the split as partial capital return; no Performance Fee applies.
- The 53% reserve is formed from the farmer share; the unused balance is intended to be returned to the farmer under established rules.
- Staged release is modeled for a no-Confirmed-Loss scenario and may be suspended by reporting failure, default, or dispute.
- Simple annualized ROI divides total ROI by the model duration in years; it does not account for compounding or the timing of interim payments.
